MUNICIPAL DISTRICT OF CROWN NO. 329

Lacombe, Alberta, March 13, 1935

The Council of the above District met in the Municipal Office, this being present Councillors Armstrong, Huettel, Parker, Hand, Hall and Stewart.

The meeting was called to order by the Returning Officer, C. W. Brathwaite, who called for nominations for Reeve.

Parker: That Huettel be Reeve for 1935. Parker, Hand, Armstrong in favor.

Hand: That Hand be Reeve for 1935. Huettel, Parker, Hand and Stewart in favor.

A deadlock being reached and unable to reach a decision, Brathwaite cast his vote in favor of Huettel, Huettel declaring him elected Reeve for the ensuing year.

The Secretary then took charge of the meeting and read the minutes of a special meeting held on March 8th, Parker moving that they be adopted as read.

Armstrong: That Fred Stewart be Deputy Reeve for the ensuing six months.

Hand: That the Municipality of Crown No. 329 pay five cents per foot for old mangles up to May 1st, 1935.

Stewart: That free gopher poison be distributed to the farmers, at the rate of one can per quarter section.

Armstrong: That Mr. Burton retain the first 1935 crop taken from W-1-2 of 9-41-97-4.

Parker: That the Secretary be bonded for \$20,000.00 for 1935.

Stewart: That the council buy a wall map of the Municipality and six copies for the councillors.

Hand: That the Council meetings be held the second Thursday in each month.

Hall: That tenders be called for the purchase of the E-1-2 of the N.E. 38-44-96-4, containing 87 acres more or less. Tenders to be in the hands of the Secretary not later than April 8th.

Armstrong: That by-law No. 87, being for the purchase of seed grain be given a first reading.

Huettel: That M. Armstrong be appointed delegate to the Hall Board Convention being held in Calgary on March 26th.

Stewart: That Parker, Armstrong and Hand be the relief committee: Huettel, chairman.

Hand: That all members of the Council to the road Committee: Huettel, chairman.

Armstrong: That Hall, Stewart and Hand be appointed Land Committee: Hall, Chairman.

Armstrong: That Huettel, Parker and Stewart be appointed Property Committee: Huettel, Chairman.

Hand: That Huettel, Armstrong and Hand be appointed Finance Committee.

Reeve Huettel read the monthly statement for February and moved approval of same.

Parker: That tenders be called for drilling well at the Hamlet of Mornington. Lowest or any tender not necessarily accepted. Tenders to be in the hands of the Secretary not later than April 14th, 1935.

Parker: That E. Walter Simpson be engaged as Secretary for this Municipality at a salary of \$1850.00; Assistant, \$650.00.

Armstrong: That Jesse Praeger be appointed Auditor for 1935 at a salary of \$250.00.

Hall: That the Council's fees be according to section 61 of the M.D. Act.

Hall: That W. Parker be the representative to the Red Deer Health Unit.

D. W. Wilson 10.00
Parker: That Pay Sheet No. 1-95 be passed.

Parker: That the last quarter of the Secretary's salary be paid, \$625.

Armstrong: That the expenses of delegations to Edmonton, \$20.00 be paid and mileage for car, \$20.00, in connection with food question.

Considerable correspondence was dealt with including letters from the various Government Departments.

Huettel: That this meeting adjourn.

COMMUNICATION

Mirror, Alta., April 12, 1935

The Editor: The Western Globe.

Sir: Of the various critics of Social Credit, how many have troubled to inform themselves as to its basic principles? How many have given any real study to our existing system? Obviously their objections spring not from knowledge but from ignorance and prejudice.

Such critics should ponder the undeniable fact that Social Credit is accepted and advocated by ever growing numbers of people, everywhere, whose intellectual powers and practical knowledge of affairs cannot be questioned.

The economic analysis and remedies of Douglas, when correctly stated cannot be refuted. What solution other than Social Credit, is there for the distribution of abundance without ruining the producer? The orthodox remedy is to control production so as bring about a relative scarcity, thereby penalizing the consumers and forever preventing the enjoyment of that plenty for all which is now easily possible.

What orthodox solution is there for technological unemployment other than state charity, or state slavery in work camps, financed by piling up debt and taxing the worker? What remedy, other than Social Credit, is there for the ever growing mountain of debt, even now unpayable, but greater debt?

Social Credit is not on trial, it is the present system that is before the bar of public opinion, a monetary system already condemned by men, and groups of men, whose considered opinions cannot be ignored.

Social Credit stands for the restoration of the "monopoly of credit" to the State; to be used in the interests of the general public which created the basis of credit. Not to believe that all money, credit, purchasing power, is created as a debt by the banking system, or that this monopoly of credit can be restored to the Crown or State is pure ignorance.

To admit that bank credit can and, at the same time, insist that State credit, issued free, could not, be used as a perfect medium of exchange is not merely ignorance, it is gross superstition or a calculated falsehood.

Just three hundred years ago the struggle that ended the "divine right of kings", we approach the conflict that will end the "divine right of the monopoly of credit."

Norman Jacques

Editor the Western Globe: Dear Sir:

I wonder if I may have a little space in your paper to in part reply to D. M. Duggan's attack on Social Credit and Mr. Aberhart, the Big White Chief. Surely D. M. did not think that he was a surprise to the people by his announcement over the radio as reported by the Edmonton Journal of the 12th inst. because we understood it from his henchmen (too that is not a lie), well his following, small as it is here in Lacombe. I would like to ask Mr. Duggan if he really thinks that he can by his flowery speech fool the people of Alberta that he is a second Moses to lead us.

I must remember that his party never had a chance in Alberta. But judging from his party's performance in Ottawa the last four years, we won't give them a chance. And right here, I'll make a prediction that he won't get a rural seat, and he will be lucky if he gets elected himself.

RIMBEY NEWS

A meeting for the purpose of organizing a social credit group in the Symonds district was held on Friday evening in the school house four miles south of Rimby. Mr. C. C. Letroy was elected president, Mr. E. A. Connolly, vice-president and Mrs. C. C. Letroy, secretary-treasurer. 21 members joined up and three delegates were chosen to represent the district at the meeting at Ponoka on Tuesday, April 16th. The delegates are Mr. Letroy, Mr. Connolly and Mr. Rex Dolman. Following the business session the radio was tuned in to a Calgary broadcast station and those assembled enjoyed a talk from Mr. Aberhart. A second meeting of the group has been called for Friday night, the 19th.

Four cases of scarlet fever have been reported in the Jola district northwest of Rimby. The cases are all in one family, that of Mr. P. Aldridge and have been placed under rigid quarantine.

Dr. J. N. C. Byers who was called on the case by the Reeve of Last West municipality, Mr. Victor Owen, made the trip by aeroplane. The 18 miles trip would have taken three hours of time by team with the roads in their present condition.

Former Premier Brownlee who was to have addressed a public meeting in the Rimby Hall on the evening of April 11th, was unable to keep the appointment due to the impassable condition of the road between Rimby and Bentley. A capacity house waited in Rimby for more than two hours for Mr. Brownlee. Some of those present had driven a distance of 20 miles. Keen disappointment was expressed when it became known that the meeting had been called off. Mr. Brownlee has signified his willingness to come to Rimby at a later date, when the roads will be in better shape.

Mr. Clifford Vigne of the Pigeon Lake district was brought to the Rimby hospital on Thursday afternoon for medical treatment for injuries about the eye and forehead which were sustained from the kick of a horse which Mr. Vigne was attempting to shoe.

Considerable loss of blood and the hardships resultant to the twenty-six mile journey by team and sleigh had reduced the patient to a state of exhaustion by the time the party arrived in Rimby. Dr. S. J. Byers is attending Mr. Vigne. Food in this district is becoming very short. Farmers in some instances are having two and three year old straw for over a distance of ten miles. Report of cattle and other stock dying from lack of feed or from the use of inferior feed, are brought in town every day. One farmer told recently of having to help his cows to their feet and another farmer who lives near Headley threatened to shoot his three head of milk cows and other stock, rather than see them starve.

Mr. J. F. Mann, proprietor of the Hooley store premised this farmer out of his dependent mood and provided feed for the stock until such time as the delayed government supplies might be distributed in that district.

Mr. DeMere of the Department of Agriculture, recently spent several days in Rimby for the purpose of taking orders from the farmers for feed. Five cars of oats and 8 of roughage (straw and hay) have already been distributed from Rimby; 50 other applications are on file awaiting approval of the government.

Several farmers of the Rimby district have sold their surplus seed and feed to the government, but a few have not considered the prices sufficiently attractive and in one case \$22. for oats in the bin was refused. Timothy hay has been selling for \$10.00 per ton.

Mr. H. E. Varty who has been a stock raiser in the Medicine Valley seven miles south west of Rimby for the past 12 years stated that this

FUNERAL OF NIEL McLELLAN

The funeral of the late Niel McLehlan was held under the auspices of the local lodge of the I.O.O.F. on Monday afternoon last. A large number of friends attended the services in the United Church, and there were many floral offerings of sympathy.

Niel McLehlan was born to Mr. and Mrs. Charles Berta, at their home twenty miles north east of Rimby on Monday, April 16th. Dr. J. N. C. Byers are attending the case. The deceased in Mrs. M. McLehlan's monophony with Pilot Post at the controls. Roads in that vicinity are impassable for cars and travel by team for that distance is a matter of hours. Little Miss Berta is the first baby of this district to have the distinction of aeroplane service.

At the Fashion Show presented by the Modern Woodmen of America to their guests on the evening of April 10th, the Season's Fashions were formally presented for inspection. A delightful musical program preceded the great moment for which avid costume seekers and rival costumiers waited, provided by Miss F. Chretien, Mr. H. Ferrell, Mrs. T. Wilkes and Mr. T. Wilkes.

Penitence and Ring Master Georges Theriault was greeted with the enthusiasm deserving for such an expert of fashions, and sensing the eagerness of his patrons, lost no time in calling upon the Mannequin staff, which displayed the latest fashions from the Junior League, Fashion Herald, Stewart and Denny Murphy introduced the lovely creature and their equally marvellous creations.

Service costumes for Ladies Maids, and Night Club Waitresses, etc., were charmingly displayed upon the frames of the Misses Charlie Raymond, A. Jirach and Dave Hill.

W. E. Decker miraculously produced a lovely pair of twins to ride in the parade, while displaying the Nurse Maids uniforms.

Sports Wear Models were fittingly displayed by our own athletic sub-deb, Harvey Cameron—the appreciation of the new colors in this season's clothing was only equalled by the enthusiasm shown for the darling times of Beach Costumes as enhanced by the beautiful Claude Rows.

Maids of Honor figures were enraptured by their promise of fresh conquests in gowns displayed by Jack Roberts, who incidentally looked as coy and shy as upon the occasion of her first marital venture.

The Titian-haired member of the Junior League, Miss Fred Langrock, displayed the Trouseau for our June Bride. Shorter veils are being sponsored, much to the distress of several present, but the chic of the bride shoes caused as much comment as any single garment.

One departure from the debutante ranks occurred when the Empress of the Four Hundred herself, consented to show her Evening Dress—Jim Hampden was her own regal self in regal garments, and under her chaparrone, petite Sam Murray was permitted to display the more choice Alaskan Fur.

Little Billie Murphy, another charming sub-deb delighted the younger set with her proudest in the creations for the Ingenue; and Street Wear Fashions once more showing the mark of English superiority, were enthusiastically approved and displayed by Miss O. P. Naught.

That the little folk should not feel left out, the child prodigy, George Frizell, did his series of something behind a moustache, in the lovely Spring models for Mother's pet. As usual all the ladies were entranced.

An unfortunate minor mix-up in the final parade, leaving the bride in charge of the twins, while the nurse wheeled the bride veil, introduced lively comment and momentarily shattered the dignity formerly present.

Monsieur Theriault was greatly jubilant by the reception of his fashion offerings and avowed that much of the success of the show was due to the assistance of Madame Murphy, the Director of Mannequins and her two able assistants, Alberta Peterson and Mae Rowe.

By popular vote, the prize for modeling was awarded to Merry Widow, Jack Roberts.

A delectable, almost chimerical lunch was served to the guests before their departure, and many of the younger set chanced.

BAPTIST CHURCH

The Resurrection of Jesus Christ in Song, Story and Sermon will feature special evening service at 7:30 and Morning Sunday School.

Sunday School and Church choirs will render Special Easter music at both Services.

Kindly bring potted plants and flowers to decorate the Church.

Juniors at 6:15. Rev. Isler will tell the Story of the Resurrection.

Young People's meeting Monday at 8 p.m.

DEATH OF F. H. TAYLOR

F. H. Taylor, a highly esteemed farmer of the Lacombe district, died at his home here on Saturday last after a short illness. He was in his 72nd year. With his family, deceased came to this district from Oklahoma, in 1910, and made his home near Lacombe where he resided until his death. He leaves to mourn, besides his wife, one daughter, three sons, John, Harry and Fred, all of the Lacombe district, besides relatives in the States. The funeral was held yesterday morning at the Lacombe cemetery. The family has the sincere sympathy of their many friends in their sorrow.

Death of Mrs. Fred Sissons

The many friends of the family in this district extend their sincere sympathy to Mr. Fred Sissons, and family, in the loss of their beloved wife and mother. Mrs. Sissons was taken ill a few weeks ago and taken to hospital here, when it was decided that her case was more serious than at first thought, and she was removed to the University Hospital, Edmonton, where she passed away.

Mrs. Sissons has been a resident of the Lacombe district for many years, and had always taken a deep interest in the community affairs of the community, and she will be greatly missed by everyone.

Besides her husband she leaves to mourn a family of grown-up children. The funeral was held on Monday morning last and was attended by a large number of sorrowing friends and relatives. Interment was made in Lacombe cemetery.

The service was conducted by Rev. J. Woodworth, assisted by Sturla Dean Cripps, of Red Deer.

ST. ANDREW'S UNITED CHURCH

Rev. R. B. Layton, Minister

Mr. L. D. Wright, Musical Director

Services at 11 a.m. and 7:30 p.m.

Sunday School meets at ten o'clock on account of the Communion Service, which will be held at 11 a.m.

The Junior Choir will sing an Anthem, entitled "The Resurrection," at the morning service.

The Senior Choir will give a Cantata entitled "The Morn of Victory" at the evening service. This is a very beautiful Cantata, and will be very enjoyable.

The usual Good Friday Service will be held on Friday evening at eight o'clock in the Church.

MARRIED

Johnson-Strack

At 5:45 p.m. on Tuesday, April 10th, there were married at St. Cyprian's Church, Lacombe, Deulla Grace Mae, daughter of Mr. and Mrs. William F. Strack, of Black Diamond, Alberta; and Jule Edward, son of Mr. and Mrs. John H. Johnson, of the same place.

The Rev. T. H. Chapman officiated.

The Witnesses were Hilda M. Brown and B. E. Chapman, both of Lacombe.

The happy couple will spend their honeymoon in and near Edmonton, and expect to make their home at Bawlf, Alberta.

REGAL SERVICE STATION

OPEN FOR BUSINESS

The Regal service station on Newton Street, (formerly Bob Park's garage) is once more open for business. The service station is under T. J. Hampson's management and offers you the best in service. This station handles the well known Regal gas, Lacombe, Deulla Grace Mae, daughter of Mr. and Mrs. William F. Strack, of Black Diamond, Alberta; and Jule Edward, son of Mr. and Mrs. John H. Johnson, of the same place.

WORLD HAPPENINGS BRIEFLY TOLD

Reunion of Toronto survivors of the Northwest rebellion in 1885 has been planned for July 26.

Lord Edward Montagu, young British nobleman who is determined to lead "a life of adventure," was said by friends to be planning to join the Spanish foreign legion.

The Quebec government's \$10,000,000 plan, "to promote colonization and return to the land," received third reading by a 43-8 vote, in the Quebec legislative assembly.

Amendments to the British Columbia Hours of Work Act to provide a six-hour day and 36-hour working week were defeated in the legislature.

Former Premier Eleutherios Venizelos, leader of the unsuccessful Greek revolt, forecasts policies of the present Greek government would lead to restoration of the monarchy.

When it comes to fighting a duel, J. E. Paget, Montreal restaurant owner, prefers soda bottles to revolvers any time. Paget routed a bandit by laying down a barrage of soda bottles.

A thoroughbred Great Dane, Sas of Calandria, will leave York Mills within the next two weeks to become guard for the Dionne quintuplets hospital at Callander, Ont. Mrs. George Hyslop is making the presentation.

Possibility of distillation of fuel alcohol from surplus low-grade potatoes will be studied and representative made to the provincial government by Edmonton District Market Gardeners' Association, that body has decided.

Soviet authorities announced the arrest of 1,074 members of the old aristocracy and old moneyed class. Some of them, it was said, will be tried for "activities against the state in behalf of foreign countries," while the rest will be exiled to the eastern reaches of the Soviet Union.

Key To Inward Vision

Imagination is Gift That Should Be Highly Cultivated

Beyond the world of outward perception there is another world of inward vision, and the key to it is imagination. To see things as they are, that is a precious gift. To see things as they were in their beginning, or as they ought to be in their perfecting; to make the absent, present; to rebuild the past out of a fragment of carved stone; to foresee the future harvest in the grain of wheat in the sower's hand; to visualize the face of the invisible, and enter into the lives of all sorts and conditions of unknown men—that is a far more precious gift.—Henry Van Dyke.

Thanks Anyway

Uncle John came to stay, and before he left he gave his nephew a pound note. "Now, be careful with that money, Tommy," he said. "Remember the saying, 'A fool and his money are soon parted'." "Yes, uncle," replied Tommy, "but I want to thank you for parting with it, just the same."

Combination Fuel Used

Fuel used in most experimental rockets is composed of gasoline and liquid oxygen. It is difficult to handle oxygen in this form because, to keep it liquefied, a temperature of 183 degrees below zero Centigrade must be maintained.

Population of the United Kingdom has increased four per cent. in the last ten years.

WHEN YOUR DAUGHTER COMES TO WOMANHOOD

Most girls in their teens need a tonic and regulator. Give your daughter Lydia E. Pinkham's Vegetable Compound for the next few months. Teach her how to guard her health at this critical time. When she is a happy, healthy wife and mother she will thank you.

Sold at all good drug stores.

Lydia E. Pinkham's Vegetable Compound

Saskatchewan Salt Deposits

Most Deposits Are Valuable, But Are Not All Suitable For Livestock

Farmers in Dendland, Tramping Lake and Seneca districts in Saskatchewan can get salt from lakes for their cattle but most of the deposits are quite unsuitable, the analytical laboratory at the University of Saskatchewan finds. In some places farmers have been buying a substitute for rock salt at local stores that consists largely of sodium sulphate.

The university has had a large number of inquiries about the composition and suitability of such salts. The lake deposits in the province generally consist of glauber salts (hydrated sodium sulphate) with more or less silt or mud. They sometimes also contain sodium chloride and calcium sulphate, Dr. V. A. Vigfusson finds.

Glauber salt, like epsom salt, is a laxative and is used to some extent as a medicine and in some patent stock foods. In the absence of common salt in the feed, glauber's salt helps to maintain the blood pressure but does not supply the chloride which is needed for the hydrochloric acid of the gastric juice. That must come from common salt (sodium chloride). Therefore, Dr. Vigfusson remarks, while these deposits represent a definite store of wealth for future generations for their commercial value as industries make them needed, they should not be used for cattle or other livestock.

Enormous amounts of salts are contained in some of these lakes. Reports have been made by the department of mines on a number of them. For example, two lakes at Grandora, 11 miles west of Saskatoon, have deposits 70 to 80 per cent. sodium sulphate, totalling over 2,000,000 tons. Some of the other deposits are much larger. The University of Saskatchewan is ready to analyze salt samples for farmers.

Little Journeys In Science

PETROLEUM

(By Gordon H. Quest, M.A.)

Petroleum consists chiefly of a mixture of compounds known as hydrocarbons. It is found in large quantities in California, in Oklahoma, in Russia, Mexico, the Dutch East Indies, Galicia, Persia, and Rumania. In 1925 the world's production of crude petroleum was about 1,000,000,000 barrels.

Crude oil is trapped in what the geologists call an anticline, which is a sort of inverted bowl of clay or shale, and is reached by drilling wells. The first oil well in America was dug by Colonel Drake at Titusville, Pennsylvania, in 1859.

Russian petroleum is found in and around Baku, near the end of the Caspian Sea. History tells us that as far back as 600 B.C. "the eternal fires of Baku" attracted the fire-worshippers.

Petroleum is separated into various products by a process known as fractional distillation. The compounds which make up petroleum boil at different temperatures, and hence they can be separated by distillation. One fraction comes off as a vapour at a certain temperature, and is collected in the receiver of the still. When the vapour has been boiled off the temperature is increased, and another receiver placed in the still to collect this fraction.

Petroleum contains gases in solution, such as methane (marsh gas) and ethane. When the crude oil is heated gently these gases are driven off and used as fuel and for the manufacture of carbide-black which is of value in the paint industry. As the temperature is slowly increased liquids which are known as naphthas come off as vapours, and are condensed by cooling to liquids again. The scientist finds that these liquids consist chiefly of pentane and hexane. This fraction of the petroleum is used as a solvent in the rubber and varnish industries. The next fraction, gasoline, which is used extensively as motor fuel and as a solvent. Kerosene (coal oil) is the next and is used as an illuminant and as fuel. After the kerosene is distilled off, lubricating oils and paraffin are obtained. The tarlike material which is left in the still is used as artificial asphalt and as a source of a light, porous coke.

To Suppress Crime

United States Enforcement Agencies Make Widespread Drive On Law Violators

A total of 1,219 arrests was reported by United States treasury law enforcement agencies as a result of a coast-to-coast drive against law violators.

Narcotic peddlers and addicts, smugglers, counterfeiters, liquor tax evaders, violators of every law for which the treasury holds enforcement responsibility, were rounded up the country over.

Just A Myth

Sharks are afraid of man and will not attack him unless cornered or first attacked. This is the opinion of Dr. Clinton L. Baker, biology professor at Southwest University, Memphis, Tennessee. The educator said man-eating sharks are a myth, declaring that like lions, they will never attack without provocation.

A winter resort is where you sit in misery and long for the furnace back home.

Milk is taken to market in bamboo milk "bottles" on the back of a donkey in Tibet.

CHILDREN'S CONSTIPATION Ended!

Mrs. H. T. Roseman, Athens, Ont., writes: "My baby boy was troubled with constipation. I gave him Dr. Williams' Own Tablets as directed. . . . Before I had given him the first box the constipation was righted. By repeating the course of Dr. Williams' Own Tablets prevent more serious trouble than that of constipation. I took him to take that interesting laxative from the baby to children of school age. 25c package."

Dr. Williams' Own Tablets

Bad For Human Nature

If People Feel No Responsibility For Troubles Of Others

Time was when the misfortune of a neighbor down the street a bit was a matter of concern to the household. On baking morning an extra loaf of bread or an extra pie would be cooked and sent round to the home where the head of the house was laid off or the mother was sick, with kindly hopes that things would be better soon. If things were serious, it was not looked upon as anything extraordinary for some one, after a day's work, to volunteer to spend the night sitting up and tending to the invalid neighbor. To the trained district worker all this sort of thing may seem to be a desperately amateur bungling way of dealing with a crisis but no one dreamed of thinking that a bowl of soup sent in to the sick family was to be classed as a "relief."

Of course the extraordinary conditions of the last few years have forced some form of organized assistance upon the community, but it would be a bad thing for human nature if the sense of private responsibility for the troubles that lie next door to us were smothered under the formalities of organized public assistance. Should this expression of human nature be crushed out, the loss to humanity in general would be incalculable. — Fort William Times-Journal.

New Style Torpedo

Invention Of Italian Scientists Does Not Warn Of Approach

A torpedo which gives its victims not even the present momentary warning of its approach is to be added to the submarine armaments of the next war. Two Italian scientists have produced a torpedo which leaves no track. The motive power is ammonia gas, which dissolves instantly in water. Present day torpedoes, driven by compressed air, leave a tell-tale trail of air bubbles. These can be sighted at a distance and the victim is thus given a slight chance of manoeuvring out of danger.

Free Entry Until November

Poultry and dairy products from Canada, under the terms of the Ottawa agreements, are given unrestricted free entry into the United Kingdom until November 1935, after which the British government in consultation with the Dominion governments concerned has the right to bring these products within a system for regulating supplies from all sources.

New Plane Tested

A swift new government monoplane, equipped with an improved radio compass, soared out twice over the Pacific ocean at Oakland, Cal., testing the equipment which the U.S. department of commerce officials have produced a "keytone" of a system of air navigation over water.

Workers' Rights

Need Of Amicable Arrangements Between Masters And Men

Acceptance of the workers' right to live comfortably and participate in their part of the direction of industry was set forth by one of the foremost figures in Canadian mineral industry as tantamount to preservation of existing social and industrial fabrics.

Schwyn Gwilym Blaylock, vice-president and general manager of the Consolidated Mining and Smelting Co., Trail, B.C., invited 300 members of the Canadian Institute of Mining and Metallurgy to study the "co-operative committee" system his company has substituted for trade unionism.

Declaring government labor legislation or state-controlled industry quite inadequate, the president of the

Italy's Electric Railways

Trains Have Top Speed Of 100 Miles An Hour

"Aerodynamic" trains to run at an average speed of 88 miles an hour, with a top speed of 100 miles an hour, are to start a new era in Italian rail travel during the present year.

The Italian State Railways have already ordered six electric aerodynamic trains, which will be put into service as soon as the electrified line between Rome and Florence and Rome and Naples is completed in the third quarter of 1935.

These trains will be used only for passenger traffic. Each train will be 250 feet long and will comprise three undrastically carriages forming a self-contained unit. In each train there will be room only for about 100 first and second-class passengers, who will be required to pay an additional fee to travel on it.

One of the problems now under study is that of ventilation. The new trains will make it possible to cover the journey from Milan to Rome in less than seven hours, while the trip from Milan all the way to Naples will only take about nine hours, instead of twelve now required.

Italy occupies the first place among all the European countries as regards the electrification of railways. There are now 2,600 kilometers of lines under electric traction and another 1,200 kilometers are being electrified. When this work is completed in 1936, Italy, it is claimed, will be the first in the world with the largest mileage of electrified railway lines.

How Lessons Are Learned

Valuable Experience Is Gained Through Mistakes We Make

There is something to be said for the fool who steps in where angels fear to tread. At least he learns a lesson which will make him less of a fool than he was before. The man who never makes a mistake never makes anything. It is far better to appear ridiculous a few times and thereby gain valuable experience, than it is to hide all our lives behind a false modesty, and while maintaining an outward appearance of wisdom, remain fools to our death. Probably Blake had this thought in mind when he wrote: "If the fool would persist in his folly he would become wise." — O. T. Miller.

Sees Large Tourist Business

Banner Year Predicted By Official Of Travel Bureau

Prediction 1935 would be a banner tourist year with business approximating the \$200,000,000 peak year of 1929 was made by D. Leo Dolan, director of the Canadian Travel Bureau, Ottawa, in addressing the Advertising Club of Montreal.

The tourist dollar was the "healthiest money" the Dominion could hope to receive this year and in the years to come, he said, as it increased general employment and made possible greater distribution of the products of the farm and stream.

Mutual Follies

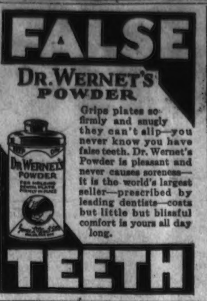

The official newspaper, *Inventiva*, has announced that Soviet shop employees must concentrate further in developing "store culture" — the courtesy treatment of customers. In many stores there are signs reading: "Clerk, be polite to customers; customer, be polite to the clerk."

Last August more soot was suspended in the air over New York than in any August since 1930.

Institute stressed the need of amicable arrangements between employers and employees to put industry and commerce on a sound basis. Mr. Blaylock's address featured the closing day of the institute's three-day meeting in Winnipeg. Mr. Blaylock was presented a platinum medal for his "outstanding contribution" to the mineral industry.

Employers did not monopolize the brains of the country but the average brain of the artisan was "fully equal, if not superior, to the average of the rest of the world." Industry and every phase of life would function more fairly and make better progress if the brains of both classes were pooled in the friendliest possible co-operation—"and the best way to know of accomplishing this is through 'co-operative committees'."

Mr. Blaylock outlined the co-operative plan in effect at the Trail, B.C., smelter.

DR. WERNERT'S POWDER

These pills so firmly establish their can't-alip-you fact that they are known as the "Wernert's Powder." Dr. Wernert's Powder is pleasant and never causes constipation. It is the world's largest seller—prescribed by leading doctors—works back again, but with not so good a salary—enough, at any rate, for us to get along on. However, for some time my husband and myself have been getting along very well. We bicker on the slightest pretext, and my middle-aged husband, who is a man, and take a place of my own. I don't really see why I should quarrel with the lady who wrote to me, shows that she is very self-contained, even to the point of being selfish. On the other hand, my husband's writing shows more tolerance and affection. He is more kind, more loyal and is capable of getting things done. Perhaps not particularly intelligent, but very sure of himself. It seems to me, the first place, that these bickerings have been caused by a lack of appreciation on the wife's part for her husband's ability to get work. This is unfortunate, and my correspondent is something of a snob. In my view, with which I cannot have much sympathy. These are top-heavy ways, and my husband, who is unable to obtain work through no fault of his own. He likes many others, is the victim of circumstances entirely beyond his control.

YOUR HANDWRITING REVEALS YOUR CHARACTER!

By LAWRENCE HIBBERT (Grapho-Analyst) (All Rights Reserved)

(Editor's Note: This series of articles on Character from Handwriting continues to attract wide interest and many readers are taking advantage of the author's offer to get a personal character delineation. You still have an opportunity of getting yours.)

I have a letter from a married woman who gives me some advice. I problem that is cropping up quite often nowadays. Here is what she says: "I am a married woman in my middle thirties, and have two young children. My husband lost his position about a year ago, and has since been unable to get any employment. Although we had some money saved up, we have had a difficult time making ends meet, and I got to a point where I am utterly fed-up with the situation. Before I married, I held a good position, and now I find that I can get my work back again, but with not so good a salary—enough, at any rate, for us to get along on. However, for some time my husband and myself have been getting along very well. We bicker on the slightest pretext, and my middle-aged husband, who is a man, and take a place of my own. I don't really see why I should quarrel with the lady who wrote to me, shows that she is very self-contained, even to the point of being selfish. On the other hand, my husband's writing shows more tolerance and affection. He is more kind, more loyal and is capable of getting things done. Perhaps not particularly intelligent, but very sure of himself. It seems to me, the first place, that these bickerings have been caused by a lack of appreciation on the wife's part for her husband's ability to get work. This is unfortunate, and my correspondent is something of a snob. In my view, with which I cannot have much sympathy. These are top-heavy ways, and my husband, who is unable to obtain work through no fault of his own. He likes many others, is the victim of circumstances entirely beyond his control."

Tally Kept On Paper

Reason Tally Sticks Were Discarded

Any day in the London Docks you may see the skipper or mate of a cargo ship, or the Customs House man, checking cases that are being loaded or unloaded by making strokes on a piece of paper. When the fourth stroke has been made all are crossed through, constituting a "gate," and a "gate" means five packages. And if this system of using strokes instead of figures had never prevailed, London's most sensational fire since the Great Fire of 1666 would never have occurred. A hundred years ago this year, when Charles Workie at the House of Parliament told a workman to turn a couple of carloads of wooden tipples—which were notched sticks divided into two parts and used as receipts for goods delivered. The workman did his job so thoroughly that the sticks became over-heated, and set fire to the House of Lords, an ancient wooden structure. When the fire subsided only the crypt and cloisters were left. The custom at the London Docks to-day of making strokes instead of figures means that the tally is made on paper instead of on a stick.

Caribou Herds Are Large

Provide Plenty Of Meat For Northern Mining Camps

The largest herds of caribou have ever been seen in the Great Bear lake district are located midway between Fort Rae and Cameron Bay thereby providing a good supply of fresh meat for the men in the mining camps. C. H. "Punch" Dickins, superintendent of Canadian Airways, Limited, at Edmonton, stated on his return from a flight to Great Bear Lake.

Mining camps continue to be active and there is little evidence of unemployment in Cameron Bay, he said.

Last fall considerable apprehension was felt for a band of nearly 40 young men who went into the mining field seeking work last summer, but the majority of them were apparently able to find work of some description.

Activity in the Athabasca lake gold area is increasing steadily, Mr. Dickins said.

Neither Of Them Won

Cat And Snake Fought Duel And Both Died

A large cat and a six-foot snake fought a terrific duel on a farm at Leeton, New South Wales—and they both lost. Suddenly coming across the snake, the cat circled round it dextrously and then slashed at it with its claws.

The pair rolled in the grass, the cat clawing, spitting and biting. After fighting desperately for some minutes, the snake relaxed its pressure. It was dead. The cat staggered a few yards and then collapsed. In a few minutes it had died, too.

Timid Wife (to husband who has fallen asleep at the wheel)—"I do not mean to dictate to you, George, but isn't that bill board coming at us awfully fast?"

A pull of approximately 30 tons is exerted on the steel frame by the strings of a grand piano.

New Zealand was the principal source of butter imported into the United Kingdom during 1934, supplying Denmark as the premier exporter.

SKIN BLEMISHES

Vanish Before Physician's Prescription

Those spots or pimples on your face—why let them go on tormenting you? Like millions of others have done, you can get rid of your skin trouble through the aid of a few capsules of Dr. D. D. Deane's Dr. Deane's prescription. It is a new scientific formula, manufactured in Campagna's Italian Balm chemist—works so fast, so sure, and so quickly restores your skin to health. All druggists sell it. Give instant relief of money refunded.

writing. It is fascinating and very interesting. It costs for your copy of the Graphichart, and an additional 10c for each specimen you want analyzed. Send with a 3c stamped addressed envelope to Lawrence Hilbert, care of Winnipeg Newspaper Union, 170 McDermott Avenue, Winnipeg, Man. Letters are confidential and will be answered as quickly as possible. But please allow at least two weeks for your reply, owing to the large volume of mail coming in.

Blazing New Auto Trail

Young Student Opening Tourist Road From China Into Egypt

A 22-year-old Vienna student, Max Reich, is blazing a new automobile route to China through Turkey, Persia, Afghanistan and India, in a 13,000-mile expedition organized with the support of the English Automobile Association and the Austrian Touring Club.

Reich's motorcar is equipped with a short-wave sending and receiving radio set and carries fuel sufficient for 1,000 miles. Through a great part of his journey there are no marked roads at present. He will have to cut his way through forests and jungles, will have to cross the Gobi desert and other sparsely inhabited or bandit-ridden regions.

Reich is accompanied by a film photographer and a writer on his journey. All have been vaccinated six times against various Asiatic plagues.

The young explorer has already two extraordinary ventures to his credit. Two years ago he crossed the Sahara desert alone on a motorcycle. Returning from Africa he set out on a journey to Bombay, again using a motorcycle and covering the distance of nearly 9,000 miles in record time.

Tally Kept On Paper

Reason Tally Sticks Were Discarded

Any day in the London Docks you may see the skipper or mate of a cargo ship, or the Customs House man, checking cases that are being loaded or unloaded by making strokes on a piece of paper. When the fourth stroke has been made all are crossed through, constituting a "gate," and a "gate" means five packages. And if this system of using strokes instead of figures had never prevailed, London's most sensational fire since the Great Fire of 1666 would never have occurred. A hundred years ago this year, when Charles Workie at the House of Parliament told a workman to turn a couple of carloads of wooden tipples—which were notched sticks divided into two parts and used as receipts for goods delivered. The workman did his job so thoroughly that the sticks became over-heated, and set fire to the House of Lords, an ancient wooden structure. When the fire subsided only the crypt and cloisters were left. The custom at the London Docks to-day of making strokes instead of figures means that the tally is made on paper instead of on a stick.

Caribou Herds Are Large

Provide Plenty Of Meat For Northern Mining Camps

The largest herds of caribou have ever been seen in the Great Bear lake district are located midway between Fort Rae and Cameron Bay thereby providing a good supply of fresh meat for the men in the mining camps. C. H. "Punch" Dickins, superintendent of Canadian Airways, Limited, at Edmonton, stated on his return from a flight to Great Bear Lake.

Mining camps continue to be active and there is little evidence of unemployment in Cameron Bay, he said.

Last fall considerable apprehension was felt for a band of nearly 40 young men who went into the mining field seeking work last summer, but the majority of them were apparently able to find work of some description.

New Zealand was the principal source of butter imported into the United Kingdom during 1934, supplying Denmark as the premier exporter.

A Law Every Mother Should Know and Observe

Never Give Your Child An Unknown Remedy without Asking Your Doctor First

According to any doctor you ask, "the only safe way is never to give your child a remedy you don't know all about, without asking him first."

When it comes to "milk of magnesia," that you know everywhere, for over 100 years doctors have said "PHILLIPS' Milk of Magnesia for your child."

So—always say Phillips' when you buy. And, for your own peace of mind, see that your child gets this, the finest men know. Made in Canada.

PHILLIPS' Milk of Magnesia

Making Trains Noiseless

England's Pneumatic Railroad Comes Very Near Success

Noisier travel by train is the latest novelty in the campaign for the abatement of unnecessary noise, and people who watched a certain train slide out of Euston station, London, one day recently might almost have imagined it a phantom passenger carrier. It was the quietest train that ever ran on a British railway—so quiet that permanent-way workers did not hear it until the engine whistled them out of the way. Folks on wayside stations merely heard a swish of air as it passed.

The train was the new Coventry Pneumatic Railroad on the London, Midland and Scottish railway, running on pneumatic tires fitted to its 10 wheels. Noise was banished except for the rum of the wind and the faint hum of the 12-cylinder, petrol engine.

Railways for years have been trying to find a light and economical unit for branch lines and for intermediate services in populous districts. They have been fighting weight and noise. This railcar looks like the nearest approach to success.

Holds Dinner Annually

Worshipful Company Of Horn Lantern-Makers Still Lives

Notwithstanding that it represents a trade which has been dead for more than a century and a half, the Worshipful Company of Horners held its annual dinner in London as usual. It is still possible to become either a horn lantern-maker or a leather bottle manufacturer by election or apprenticeship.

Horners are no longer craftsmen. They are solicitors, architects, tea merchants or stock brokers. They boast of their antiquity, for the Guild of Horners dates back to 1284 and the Leather Bottle Makers joined forces with them in 1477.

In 1881 the company had dwindled to a small group of 10, but today it numbers 170 Freeman of the City of London. Their chief business, now that bottles are of glass and lamps are electric bulbs, is the nomination of sheriffs for the city, and the holding of an annual banquet in the hall of some other worshipful company. The Horners themselves are home-les.

The Russian Jewels

Valuable Gems Not Likely To Appeal To British Taste

Very magnificent and elaborate are the tragic Russian jewels, which will be on view in London. These 2,000 gems were once the property of the Tsar and Tsarina. Except for their historic interest and their value they are not likely in the least to appeal to British taste, says the News of the World, for Russian art of this kind is quite distinctive, and of that heavy nature which went out of fashion in England after the death of Queen Victoria.

The number of hogs graded in Canada for the first eight weeks of 1935 was 473,011. During the corresponding eight weeks of 1934 the number was 517,324.

It is estimated that hundreds of tons of sugar are wasted annually in the bottom of teacups. This terrible disclosure will cause a big stir in Aberdeen.

LINCOLN NEWS

An interesting meeting was held at the Lincoln Community Hall on Monday evening, April 16th, for the organization of a Social Credit Study Group. Despite the very bad road, a good attendance assembled and marked interest was manifested.

Bill McGeehan was chosen as Secretary pro tem. Rev. F. G. Matthews acted as chairman. The following persons were elected as officers: Carl Christensen, President; Jolmer Johnson, Vice-President; Eddie Miller, Sec.-Treas., and the following committees were chosen.

Programme Committee: Clarence Miller, Henning Johnson, Mrs. G. Carter, Press Committee: John Fisher, Kirk Dix.

The next meeting of the group to which all interested are invited will be on Wednesday, May 1st at 8 p.m.

THE FIGHT

"Heartless Harold" McMaisters (the unknown undertaker), has given his name to the big fight here the end of the month. "Heartless Harold" says he will meet the best man in the land and assure all that he can whip his weight in wildcats. Fans who have never seen the hombre perform in the ring have missed half of their life. As compared to his fighting prowess, the prowess of Paul Bunyan is just a minor affair. The big poster will soon be out and all fans should watch for them. All fighters will be top-notchers and it should be the best fight card ever staged in Central Alberta.

In an interview with "Tex" Toller today, he informed us that he has all arrangements well in hand, and with the exception of a few minor details, everything is in readiness. The old Comet Theatre is now being renovated for this big event, and

11:00 a.m. Special Service and Holy Communion.
7:30 p.m. Special Evening song. Special music both morning and evening on Easter Day.

AT THE AVALON

"The Richest Girl in the World"
A lovely, completely entertaining comedy drama, with considerable emphasis on the comedy. This picture is replete with amusing situations. Set in New York and moving rapidly, the story concerns the quest of the world's richest girl for complete happiness for herself alone, rather than via her money. Starring Marian Hopkins, Joel McCrea, Fay Wray and Reginald Denny.
Double Feature
Coming Ronald Coleman in "The Masquerader," also Buck Jones in "McKenna of the Mounted," April 25, 26 and 27.
Wallace Beery in "Viva Villa," May 2, 3 and 4.

A preliminary meeting of the Lacombe Football Club was held in D. Cameron's store on Thursday evening, April 17th. Arrangements were made for a general meeting on Wednesday, April 24th, at 7:30 p.m. in D. Cameron's store. All interested in football are requested to attend.

Do not forget this is the last week of the Sat. Glo Sale at the Lacombe Furniture Store.

Mrs. Fred Fisher left on Monday of this week for an extended visit to Vancouver and other coast points.

Have you got your tickets for the Edmonton Male Chorus, appearing at the United Church on April 27.

"Situation Filled." Thanks to applicants "The Last We Forget Club."

Is Democracy A Failure?

Articles appearing in this column from week to week have, over a considerable period of time, had two main objectives:—to convey information and to provoke constructive thought on the part of the reader. At the same time an earnest endeavor has been made to refrain from discussion of questions which are the subject of partisan political controversy or of sharp differences of opinion arising out of racial or religious views. In the present disturbed state of the world, when practically every financial, economic and social question has become part and parcel of some political creed it is no easy matter for any writer, unless he confines himself to meaningless platitudes, not to appear to take sides and express views which others may interpret as somewhat partisan in character one way or another. Notwithstanding this difficulty an honest effort has been made in this column to steer clear of partisanship while at the same time in discussing matters of public interest to give some point and value to these articles.

The writer is firmly convinced that what is needed at all times, and never more so than at present, is adherence to well grounded sound principles, the dissemination of accurate information, and clear constructive thinking on the part of each individual citizen. A demagogue may be clever and interesting and able to sway a mob, but he is not a safe and constructive leader and a mob is a dangerous thing.

This week we propose to submit a few questions, but do not intend to answer them. Rather our object is to have the reader answer them for himself or herself; in other words, do their own thinking.

General Hugh S. Johnson, until recently director of Roosevelt's NRA programme, stated the other day that "democracy is the best government in the world for peace and prosperity; but it is the worst government in the world for a great war or a great crisis." Is this true, and if it is true what does such a statement or situation imply? Does it mean that democracy as a system of government is right, but that the people who constitute the democracy, and therefore the government, are unreliable and cannot be trusted? Is it the system or the people who are weak? Does it mean that when things are proceeding smoothly and the people have a minimum of worries, they are reliable, thoughtful, industrious? Does it mean that when a crisis develops these same people become panic stricken, emotional and reckless, ready to act precipitately without taking thought of the ultimate consequences of their action?

Does General Johnson's statement, if true, imply that the nations of the world should abandon democracy as a system of government and revert to more autocratic and dictatorial forms of government, thereby relinquishing the political freedom which is now theirs, and entrusting to such more autocratic governments full control at all times, in peace and prosperity as well as in times of war, emergency and crisis?

If democracy is not to be abandoned, and we are not to accept Communism, Fascism, Socialism, or other forms of government which involve abandonment of existing democratic political rights and freedom, how is democracy to be made safe for the world at all times, because it cannot be thrown into the discard in times of trouble and emergency and resurrected and made to function efficiently the moment the crisis passes?

It will be admitted that with the coming of what has been termed the Industrial Revolution of the Nineteenth Century, human society was completely reorganized. The worker has risen from his old feudal state and there has been an extraordinary rise in wage levels and living standards. With this rise of the economic status of the worker there has been an even more pronounced rise in his social and political status. Public schools, newspapers, labor unions, and the influence of wage-earners as consumers have established the political power of the workers and primary producers. The universal ballot, without property or educational qualification, have given control of government to the masses of the people.

Commenting on this development a professor of economics in one of the great American universities has written: "Here lies the danger of injury to progress. This power has been obtained, naturally enough, in advance of economic knowledge. Visionary theorists and self-seeking politicians may guide and direct it into perilous paths. Nobody wants to throw back this tide of democracy. Nobody can. But it needs to learn self-control and to gain understanding. It has neither at present."

In this professor of economics right? Is democracy endangered by lack of self-control and understanding on the part of those very people who have the most to lose and suffer if democracy is lost to the world, and who have the most to gain and enjoy if democracy is maintained and made to function in times of emergency and crisis as well as in times of peace and prosperity? In a word, are our present political rights and power under democracy to be unthinkingly utilized in a time of stress and emergency to overthrow and destroy democracy itself? Are people going to prove the truth of General Johnson's observation that democracy is not a safe system in times of crisis?

How can people be taught self-control in times of emergency? How can the tendency to panic be overcome? How can understanding be given to the masses so that they will refrain from panic and exercise self-control and thus overcome the crisis and prevent the taking of disastrous action? How, when there are always demagogues, agitators, self-seekers whether in politics or other spheres, ever ready to inflame and mislead the masses, are these masses of voters who to-day control all governments, going to be educated to think for themselves, refrain from being influenced by mob psychology, and exercise self-control through the obtaining of sound knowledge and an understanding of basic irrefutable principles?

Is the task too great for democracy, that is, for mankind itself? Or must mankind revert to the state from which it has struggled upward through the centuries and make confession that, being incapable of self-government in the mass, is only one thing to do and that is to repress its trust and place the power which the masses now possess in the hands of a few to exercise full power, direction and control over them? Finally, if this is done, will the masses remain content to have it so, or will the old struggle of man be commenced all over again?

This is the acute problem facing the world to-day? Democracy itself must and will answer it. Will that answer be for its own preservation, or will it be for self-destruction?

To honor the spirits of 168 horses and 19 cows which had served the Imperial Japanese household a special memorial service was held recently in Tokyo.

For the first seven weeks of 1935 shipments of livestock from Western to Eastern Canada included 4,965 cattle; 271 calves; 33,293 hogs, and 16,625 sheep.

Bells Rang Electrically

Italian Villagers Looked For Miracle Until Mystery Solved
When they heard the bells of the little church of Santa San Pietro ringing for a number of days and nights, apparently by themselves, the villagers of Lucca, Italy, thought it portended a miracle. The clappers of the bells were tied and the parish priest locked the bell tower and put the key in his pocket. But still the bells went on ringing. Finally the local electrician discovered the bells were being rung electrically as the overhead wire for the tramway line between Lucca and Magliano had come into contact with the belfry. Now the villagers are able to sleep again.

DOUBLED UP WITH RHEUMATISM

Could Not Wash Himself Nor Brush His Hair

So bad was his rheumatism that his friends declared he would never work again. Although he is 70 years old, he proved they were wrong. Read what he says:—"I am seventy years of age. Last Christmas I was completely doubled up with rheumatism. I could not brush my hair nor wash myself. People said I should never work any more. I am working harder than a young man to-day. Thanks, many thanks, to Kruschen Salts. I take them in any hot water I have ready to hand. I have not had a rheumatic attack since. Kruschen Salts have done it."—G. J.

Rheumatic conditions are the result of an excess of uric acid in the body. Two of the ingredients of Kruschen Salts have the power of dissolving uric acid crystals. Other ingredients assist Nature to expel these dissolved crystals through the natural channel. In addition, there are still other salts in Kruschen which prevent food fermentation in the intestines, and thereby check the further accumulation, not only of uric acid, but of other body poisons which undermine the health.

Aircraft Apprentices

Royal Air Force School Will Train 1,500 Boys
The expansion of the Royal Air Force by 41 squadrons necessitates a greatly increased intake of personnel. A large proportion will consist of boys, of whom 1,500 will be required during the next 12 months.

The majority will be entered as aircraft apprentices, but substantial numbers will be required as air gunners and apprentice engineers.

The aircraft apprentices are trained for three years in the special technical schools of the Royal Air Force to become fitters, instrument makers, and wireless operator mechanics. These are the most important trades in the Air Force, and the highly skilled aircraftmen employed on these duties receive the highest rates paid in the service. The age limits are 15-17.

Boy entrants are taught the skilled trades of mechanic, photographer and wireless operator. The rates of pay and conditions of service are also good.

Left Estate To Servants

Chaufeur, Cook, And Maid Inherit Mansion Of Mistress
A chauffeur and his wife, a cook and an "uptight girl" are masters and mistresses of an estate at Newton, Mass., in which a few days ago they were servants.

The will of their late employer, Mrs. Jessie A. Goddard, 80, left them the stately mansion to do with as they saw fit.

Heirs to the estate were William Wilson, for 25 years Mrs. Goddard's chauffeur; his wife, Annie; Miss Margaret Macaulay, cook; and Miss Jean Douglas, maid.

Other bequests, totalling \$200,000, were distributed to kindred relatives, servants, charities, churches and distant relatives.

Uruguay Imports Potatoes

Although They Plant And Harvest Two Crops Yearly
In Uruguay, South America, they have two potato crops, in which the first and most important is planted in September and October and harvested from December to February, while the second is sown in January and February and dug three months later, according to the Agricultural Department of the Canadian National Railways. The domestic crop is insufficient to meet consumption. Imports consist principally of table potatoes, but there is a certain demand for seed. The bulk of the table potatoes come from Argentina. Seed potatoes are imported from the United Kingdom, Germany, France and Spain.

recognized by an official, who insisted upon detaining him until he could obtain someone who could vouch for his identity; which happened to be a matter of some little time, since he was in a district where he was comparatively unknown.

Royalty Needs A Passport

Only King And Queen Exempt From Carrying One

It is not generally known that during his visits to the Continent, the Prince of Wales carries a passport just like any other traveller. But so well known is His Royal Highness across the Channel that rarely is he asked to produce it. Having regard to the number of miles he has travelled with it, since it was first issued to him, it is probably been issued less than any other of similar age. The only members of our Royal Family who are exempt from carrying a passport are the King and Queen, and of the others, the Duke of Cornwall has made more frequent use of his than any other British royalty. This he uses chiefly for his annual visit to his villa in the South of France, but, like the Prince, his Royal Highness is now so well known to all the officials with whom he is brought into contact during his journeys through France that it is but rarely that he is asked to submit it for inspection. Though all rulers are exempt from the necessity of carrying passports one who is still a sovereign de jure was recently held up for his. This was a few months ago in Switzerland, when King Alfonso was un-

Using Sun For Cooking

Solar Heat Collector Shown At Meeting Of Scientists

A device for making the sun do a part of man's work was shown to the members of the American Association for the Advancement of Science at the beginning of its winter meeting in Pittsburgh. It is a solar heat collector which, in twenty minutes, develops temperature in excess of 400 degrees Fahrenheit. The inventor is the secretary of the Smithsonian Institution, Dr. C. G. Abbot. The device can be used for ordinary cooking purposes. Dr. Abbot has been using it on Mount Wilson (California) for the generation of steam for power. It is hoped that ultimately it can be made to drive large steam engines at a practicable cost. The apparatus employs a number of small mirrors fixed at right angles to the earth's axis and mounted on a frame which will turn on an axle parallel to the earth's axis. There are a number of tubes filled with black oil and protected from loss of heat by double vacuum jackets. These transmit the collected heat to a reservoir of oil, and into this reservoir ovens are inserted for cooking purposes or a tubular boiler for generating steam.

Ships Have New Clocks

All Synchronized And Adjusted By Captain From Bridge
Ships at sea will no longer have clocks that have to be adjusted by the sun and chronometers.

Two new ships to be launched by Harland and Wolff, famous English shipbuilders, have a revolutionary system of clocks which will give accurate time every second of the day or night.

The shipbuilders have invented a system whereby synchronized clocks aboard are constantly adjusted, whether the ship is travelling east or west.

Clocks on ships moving eastward, away from zero longitude, will automatically gain, while those on ships moving westward will lose. The new system is under the control of the captain's bridge, where a master clock is situated which adjusts all clocks on the ship.

A British company has produced a plastic material from which to make transparent, colorless dishes and other objects, attractively engraved in glassware patterns.

Kidney Troubles

Prof. MacLeod, Co-Discoverer Of Insulin, Dies In Scotland
Prof. John James Richard MacLeod, 58, co-discoverer of insulin, who spent a number of years teaching at the University of Toronto and the Western Reserve University, Cleveland, Ohio, died recently at Aberdeen, Scotland.

With Sir Frederick Banting of the University of Toronto, Prof. MacLeod was awarded the Nobel prize in medicine for the insulin achievement in 1923.

Prof. MacLeod returned to Aberdeen seven years ago to take the chair of physiology at Aberdeen University.

Lives of thousands were saved by the insulin treatment for diabetes which Sir Frederick, Professor MacLeod and Dr. Charles H. Best developed.

Prof. MacLeod was born at Cluny, near Dunkeld, Scotland, son of Robert MacLeod, and was educated at the Aberdeen Grammar school, and at Marischal College, Aberdeen. After a short period of post-graduate study in London and on the continent, he came to the United States. At the age of 27 he was appointed professor of physiology at the Western Reserve University, Cleveland, Ohio.

Handles Letters Quickly

Robot Sorter Has Been Tested At Brighton, England

In future, most letter-sorting may be entrusted to a machine capable of handling letters three times as quickly as by hand. This robot sorter, which has been tried out at Brighton, is like a huge typewriter. Letters pass into it on a running belt. When the practiced eye of the operator sees Leeds, for instance, he presses the Leeds key, and these letters automatically fall into their proper receptacle. It is to be hoped, for the peace of mind of the operator, that there is a receptacle for the doubtful class which requires a handwriting expert.

Cheerful Factors

Moderate Improvement Shown In "The Expediter" To Continue

"The Expediter" improvement reported a year ago may be expected to continue," the fourth annual "Farm Outlook for Saskatchewan" prepared by Dr. William Allen and Professor E. C. Hope of the department of farm management of the University of Saskatchewan predicted. Though doubtful but more likely to rise than decline, some improvement over last year in prices for beef cattle, dairy cows and butter, rising prices for sheep and work horses, and a rise in wool towards the close of the year, some of the cheerful factors indicated.

PILE TORTURE NOW UNNECESSARY

Writer Offers To Prove Swift Value Of Home Method

The torture and suffering from Piles is now unnecessary, and an account of the delivery of the subject, many hesitate to seek relief. Why continue the miserable torture of Piles, or suffer your condition until a painful and expensive surgical operation is necessary, when a simple, pleasant treatment may bring you such freedom from sources and suffering?

Recipes For This Week

(By Betty Barclay)

PEANUT BUTTER WHIRLS

2 cups (½ pound) vanilla wafer crumbs
¼ teaspoon vanilla
Sweetened condensed milk (approximately 7 tablespoons)
¼ cup peanut butter.

Roll vanilla wafers to crumbs and add flavoring. Add ¼ cup sweetened condensed milk, blending thoroughly. Add remaining sweetened condensed milk, a spoonful at a time, until mixture becomes thick paste. Pat out in wax paper (in an oblong ten inches by six inches) and let stand until surface dries a little (15 minutes). Spread with peanut butter and roll up like a small jelly roll. Chill. Serve, cut in thin slices. Makes 1½ dozen.

SWISS STEAK

2 pounds round or sirloin steak cut 2 inches thick
¼ cup flour, mix with salt and pepper
¼ cup ham or bacon drippings
Few slices onion
¼ green pepper, chopped fine
2 cups boiling water or 1 cup water and 1 cup strained tomatoes.

Pound flour into meat with wooden potato masher or edge of heavy plate. Heat the fat. Brown the meat on each side in it. Add onion, green pepper, boiling water and tomato. Cover closely. Simmer two hours. This may be cooked in a casserole in the oven. Other vegetables may be added if desired.

Men Take Nursing Course

Class Has Been Arranged By Y.W.C.A. In Montreal

The Montreal Young Women's Christian Association has received so many inquiries from men wishing to take the trained attendant course that it has decided to open a class for men only. The course, which will begin in the early spring, will cover care of chronic, convalescent and non-serious cases of illness, simple cooking, the art of reading aloud and amusing patients, as well as the rudiments of nursing and the principles underlying them.

PLUG SMOKING TOBACCO

President Of Canadian Legion Makes Plea For Scientific Study Of Conditions Of War Veterans

The present inquiry into the unemployment situation among ex-service men was not "another veterans' ramp on racks," Brigadier-General Alex. Ross, Dominion president of the Canadian Legion, told the Hyndman commission at Ottawa. It was an effort on the part of the organized veterans to secure a scientific study of conditions as they exist and to contribute to that study the experience and wisdom of the veteran body of Canada.

The commission is under the chairmanship of Mr. Justice Hume, president of the pension appeal court, and includes Col. C. B. Price of Montreal and W. B. Woods of Toronto. General Ross emphasized that the service men were "not after money." He did not want the government to make any expenditures on them; but they did want to assist the government to ensure that what expenditures were made, were made scientifically and with proper regard to economy and usefulness.

"Unemployment bore more heavily on ex-service men than on the rest of the community and even with the return of normal conditions, said General Ross, it would be difficult for the workless veteran to be speedily or profitably absorbed in industry. The Legion president summarized his conclusions as follows:

"During these years of depression there has grown up a great army of youth, clamoring, and rightfully clamoring, for admission to trade and industry wherein they can work out their destinies, as they are entitled to do. They are young, generally well educated and capable of rendering efficient service."

"The unemployed ex-service man has to meet this competition, subject to the following handicaps:

"The average age of the group is believed to be approximately 47 years.

"By enlisting for service of his country, and while he may have received physically unimpaired, yet he sacrificed opportunity.

"There is a large proportion of unskilled labor. Thousands of boys between the years of 16, 17 and 18, or thereabouts, rushed from school to this forces. For years their every move was ordered and they returned grown men, totally unprepared with the struggle for economic existence.

"So many suffer from war disability. According to the figures for 1934 there were then in Canada 77,855 disability pensioners, of whom 50,077 were in receipt of pensions amounting at less than 40 per cent and with average pension, exclusive of dependents, of \$210 per annum.

"The parliament of Canada, in accepting the War Veterans' Allowances Act, accepted the principle that in modern warfare there were 'intangible disabilities' resulting from nervous or other form of strain, and, as a result, during the fiscal year ending March 31, 1934, 3,069 ex-service men under the age of 60 years, were classified as permanently unemployed. It is reasonable to suppose that a very much larger number are practically unemployed.

"Continuous unemployment has affected these men more seriously than in the case of other unemployed. They are conscious of having served their country well, they feel that they have been forgotten, and it rankles, and they worry over their children. They feel that an ex-service man's children should be brought up to be self-respecting citizens, not objects of relief."

The ex-service group, said General Ross, was a federal responsibility for the following reasons:

First, because to a very large degree their physical and industrial condition cannot be dissociated from war service; second, because they are handicapped by lack of training and opportunity as a result of service; and third, because it is well known that recruiting was not uniform throughout Canada and it is unfair that communities from which there was practically a 100 per cent enlistment should now have to bear the burden of these aging men, while others, from which the response was not so great, should escape such a burden.

It is only through federal intervention that this burden can be uniformly distributed and the relief afforded uniformly effective. There is abundant evidence that many municipalities in Canada regard their responsibility towards unemployed ex-service men in this light, with the result that ex-service men and their families often suffer accordingly.

In conclusion General Ross urged that special machinery be devised to deal with every case receiving aid. Government aid and voluntary effort were an ideal combination in that they would free the situation from the influence of politics and departmentalism.

Approximately \$3,500,000,000 was paid to policyholders and beneficiaries in the United States and Canada by insurance companies last year.

Wealth In Muskrat Industry

Ranching Area Now Being Surveyed In Northern Manitoba

Furnished with startling proof of wealth, producing possibilities in the muskrat industry, the provincial government has placed a survey party of 40 men in northern Manitoba to map out a muskrat ranching area of 700,000 acres between The Pas and Cedar Lake.

Trapped almost bare of muskrat life in past years, this area is staging a great comeback as evidenced in the success of Thomas Lamb, fur rancher, who leased 5,000 acres from the province three years ago and last season trapped 12,000 muskrat. Three years ago only 40 muskrat houses were found on the Lamb ranch. To-day as the result of careful protection there are 8,000 "rat huts".

It is estimated by authorities that the area, under proper protection and with scientific conservation, is capable of producing between 10,000,000 muskrat pelts a year, and this is held to be a conservative estimate.

GARDENING
Gordon L. Smith

Starting Seed Indoors
If the seed is started indoors, from two to three weeks can be saved with many flowers and vegetables. In districts where the growing season is rather short, certain things must be grown in this way if bloom or maturity is to be guaranteed. Among the flowers are pansies, asters, marigolds, zinnias, petunias, cosmos, artemisia, stocks, and snapdragons, though with the possible exception of the petunia and aster, good results can also be secured in the warmer sections of the Dominion from seed sown in the open ground. With vegetables the list includes tomatoes, cabbage, cauliflower, egg plants, brussels sprouts, broccoli, celery and head lettuce. Naturally, when sown under glass in March, and set out as well started plants in May, such things are away ahead of seed sown in the open ground after the spring frosts are over.

Add New Things
Much of the interest in flower gardening lies in trying something new. Of course it is not advisable to make over the whole garden each spring, nor should one abandon completely all the old plants which have done well in the past, but with something entirely new each season one can increase the interest. A special part of every seed catalogue will be listed the very latest creations in both the flower and the vegetable kingdom. These are which were always double before now appear in a single type, or perhaps a new distinct color has been added. Giants have been dwarfed, the new tiny zinnias, or very much increased height, added to something which a few years ago could only be secured in midsize size. Practically all the leading flowers may now be secured in both doubles and singles.

When To Plant
The first vegetables to be planted are those things that are very hardy and will stand a fair amount of frost. These should be sown just as soon as the soil can be worked. They largely consist of the type of which the leafy part is eaten like lettuce, spinach, endive, and also the root crops like the radish, garden pea, onions, beets and carrots. Later on, as the weather has turned, commonly warmer, and there is little danger of frost, in go the second group, such as beans, cabbage plants, potatoes and corn. These are followed by melons, squash, cucumbers and pumpkins, vegetables that cannot stand any frost whatever and which do not make growth until both the air and soil are warm. The above are the general first planting rules. Only with most vegetables, successful planting is desirable, a little of the seed sown each week or ten days from first planting date on, so that the harvest will be spread over weeks instead of days.

Flagpole Forty Years Old

Outstanding Contribution To Durability Of B.C. Douglas Fir

One of the old pioneers of New Westminster, B.C., is the old flagpole which has stood on the courthouse grounds 40 years. It is just as strong, sturdy and serviceable now, as when it was first placed in the earth by Joseph Burr, then a guard of the old provincial jail, says Charley Callick, courthouse janitor.

This flagpole is thought to be the oldest in existence in British Columbia. In 1894, Dec. 31, it was in two sections, both of Douglas Fir, cut from the area that is now Central Park.

It has withstood the ravages of time and elements, even surviving the fire of 1898 and is an outstanding example of the durability and wearing qualities of British Columbia Douglas Fir.

The pole is 108 feet high and more than 80 flags have worn out, fluttering from its top.

A wheel equipped with a number of shovels is a German device for speedy excavating.

Northern Ireland has a campaign against motorists who "cut in" on cars.

London subways have just installed 137 escalators.

Africa Has "Sausage Tree"

Elongated Fruit Often Grows Nearly Three Feet Long

Natives of the heart of darkest Africa do not have to raise pigs in order to supply themselves with sausage, if, indeed, they ever heard of such a dish. Whether they are familiar with sausages or not, they have a good substitute which grows on a variety of tree known to botanists as the *Kigelia tinctoria*, or, as it is popularly called, the "sausage tree."

The "sausage tree" is native to central Africa, although it is now grown in other tropical and semi-tropical lands. One of these rare trees is growing in Miami, Florida, and is producing a good supply of "sausages." The sausage tree grows to a height of 50 feet and its elongated fruit, which is shaped somewhat like a link sausage, often reaches a length of nearly three feet.

New Mountain Range

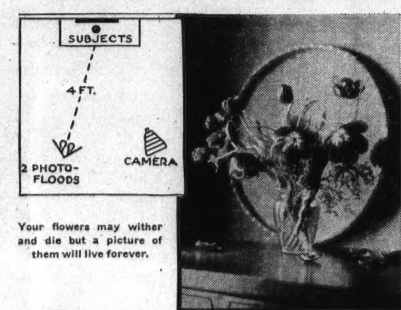

Discovered By Young U.S. Explorer In Yukon Territory

Discovery of a hitherto unrecorded mountain range and a large glacier in the southwestern corner of Yukon Territory has been reported to the National Geographic Society by Bradford Washburn, young explorer of Cambridge, Mass. Washburn telegraphed from Carcross, the expedition's base camp had been established near the tongue of the unknown glacier which descended eastward for nearly 50 miles into the Alsek valley from the peak of Mount Hubbard, one of the highest of the St. Elias range.

Approximately 1-200th of a cent's worth of electricity is held by the average thundercloud.

The SNAPSHOT GUILD

FLOWER PICTURES

Your flowers may wither and die but a picture of them will live forever.

It would be quite unusual to find a mother, wife or home-maker who has not taken a picture of her flowers or an object of art in the house that for one reason or another has become the "favorite." Flowers are much like friends. You do not doubt like and respect all of the friends you associate with socially or you wouldn't seek their companionship nor accept their hospitality. There is invariably, however, one or two who like particularly well. There is something about them that appeals to you. Their very presence cheers you. It may be their personality, their manner of speech, their consideration of others, even their idiosyncrasies or many other things referred to and classified under the small but greatly publicized word—"fit."

We can't say that flowers have "fit," that's stretching things a little too far; but they do have a way of becoming a bright spot in our lives.

Why not keep a record of their growth and beauty with snapshots? You can take good pictures of flowers with any camera in the house or outdoors but to-day let's discuss pictures of flowers in the house.

Proper lighting is the foundation for good flower photography. It should be remembered that flowers form in any graphic illustration. In outdoor photography natural lighting is depended upon so it is necessary to wait until the sunlight comes from the right direction to get the proper lighting for your subject.

As a general rule, bright direct overhead light is not desirable so the best results are obtained when lighting comes more from the sides than from the front. In doing so you will generally find it gets depth in the picture. You will notice that the tray, used effectively as a background, is tilted against the wall and not flat against it. By tilting the tray the shadow to the right is made possible and adds greatly to the depth and attractiveness of the picture.

Supply Is Increasing

Canada's Production Of Timothy Seed Is Much Greater

In the past five years Canada's position in regard to timothy seed supply has been changed from that of a heavy importer to that of a large producer, with production, in 1934, amounting to almost enough for Canadian needs. This is particularly fortunate at the present time, when there are only small supplies available for importation from other countries, owing to their greatly reduced production as a result of drought in 1934.

Timothy seed production in Canada has increased from a few hundred thousand pounds in 1929 to more than five million pounds in 1934. The importance of last year's Canadian crop is not alone because of volume, for the price per pound to the grower is about 16 cents. This is the average price this year, but there is still ample room for further expansion, as any surplus seed produced in Canada should find a ready market abroad.

Much of the increase in timothy seed production in Canada during the past five years is a result of the organized encouragement of the industry by the Dominion Seed Branch in providing the service of field crop inspection and assisting in supervising threshing and the seed cleaning operations at central seed cleaning plants.

Interesting To Motorists

Statistics On Chances Of Accident If Traffic Rules Ignored

To encourage safer driving among truck drivers along motor highways a trade journal recently printed some facts based on accident figures that will be instructive to the pleasure motorist as well. When the statistics adjusted their side rules, here is the statement they gave:

If you cut out of line of traffic your chances of having an accident are multiplied by 50.

If you drive over forty miles an hour your chances of having an accident are multiplied by 25.

If you pass another car on a curve your chances of having an accident are multiplied by 21.

If you pass another car going up hill your chances of having an accident are multiplied by 10.

If you fail to signal a turn or stop your chances of having an accident are multiplied by 5.

The driver who cuts out of line and drives over forty miles an hour usually explains afterwards that he "was in a hurry." He got a late start and had to make up time, thus endangering his own life and property and those of others. With a ton of motor car, he tries to defeat the team of time and the law of averages. "Casey Jones" tried it and won fame. But he survives only in song—Christian Science Monitor.

Percentage Was Low

English Doctor States Few Murderers Are Mentally Defective

Of 235 murderers who came under his observation only 35 were insane or mentally defective. This is the conclusion of Dr. W. Norwood East, a prison commissioner, in England, who has submitted his deductions to the Medical-Legal Society.

Dr. East tabulated 188 murders committed by sane persons thus:

Due to jealousy, 46.

Inspired by pecuniary gain, 32.

Prompted by revenge, 31.

Due to desire to be rid of an inconvenient person, 15.

Due to suicide pacts, 10.

Arrested from attempts to avoid arrest, 8.

Some murderers appeared to commit crime largely to obtain for a brief space the spotlight of publicity. Of 300 homicides at Broadmoor prison, 62 were melancholics. It was common for the sane murderer to kill insanity and for the insane murderer to pretend to be sane.

Sir Bernard Spilbury, the noted pathologist, agrees with Dr. East that murderers found the burden of secrecy too heavy to be borne. The sane murderer would have the crime on his mind from the time of its commission, would be continually turning it over, constructing his defence, and seeking self-justification until he would come to believe his own story.

Home canneries for fruits and vegetables on the farm and in rural centres are a recent development of great importance and possibilities. It is estimated that in 1934 there was about 1,700 registered establishments operated in Quebec with a production of probably 230,000 cases. The movement is spreading in Ontario where 100,000 cases were produced in 1934.

The skin of white whales from Hudson Bay region is exported and used in fine leather goods.

Story Of Fish Food Tells Of Utilization Of The Energy From Sun's Rays Falling On Ocean

The Best Citizen

One Who Has Welfare Of Community At Heart

Of all the lost talents, that of belonging, of being a true member of the community, is the greatest, and for many in our large cities, it is the most lacking. The citizen, patriot—to take on the State, so that what it does, you do, to have the State within you, so that all that wounds public life hurts you—is to recover the top root of existence, to lay hold of the most vital of all the strands of life.—Joseph Lee

FASHION FANCIES

Most matrons—others too, will like this smart tailored, yet utterly feminine looking dress. Its likable ribbed band collar merges into a slimming vest effect. Ellen Worth style No. 853 designed for sizes 36 to 48 inches. Requires 3 1/2 yards of 35-inch material with 1/4 yard of 38-inch contrasting.

Patterns 20c each. Address mail orders to: Pattern Department, Winnipeg Newspaper Union, 175 McDermott Ave. E., Winnipeg.

The Spring Fashion Magazine is better than ever. Entirely illustrated in color you will find it a very timely and useful addition to your wardrobe. It is a guide to the latest in clothes for cruising and clothes to brighten the lives of stay-at-homes. Many delightful little models for the members of the family. Of course, patterns are obtainable for the designs illustrated. Send for your copy today, the price is 20 cents.

Pre-Cooling Dressed Poultry

Very Necessary To Avoid Any Freezing During Process

The object of pre-cooling dressed poultry before packing is to remove the animal heat from the fowl as quickly as possible. The loss in weight during pre-cooling is usually about one-quarter per cent. of the original weight of the birds. Thus, as Dr. W. H. Crook, of the National Research Council, Canada, points out, one ton of poultry will give off about five pounds of moisture, or enough to saturate 17,000 cubic feet of air at 32 degrees Fahrenheit. Poultry should be pre-cooled at from 30 to 32 degrees Fahrenheit, this being the lowest temperature that can be employed without freezing. It is particularly important to avoid freezing, even at the surface, if the product is to be held in the chilled condition. In a room 30 degrees Fahrenheit poultry can be cooled from a temperature between 80 to 100 degrees Fahrenheit to within 2 degrees of the room temperature (30 degrees) in 10 or 11 hours, and to the room temperature from 20 to 24 hours. Ideally, poultry should be packed at the temperature at which it was pre-cooled, but for the convenience of the packers it is customary to work at a somewhat higher temperature.

Visit From German Warship

A sleek, grey vessel glided to an anchorage in Vancouver harbor in a recent week and the event re-opened a chapter in German-Canadian relations that has been closed for more than twenty years. When the liberty boats of the German cruiser Karlsruhe discharged their cargoes of tin, uniforms and cadets and nattily dressed officers, it was the first time since 1914 that a German warship had been seen on Canadian soil.

Peasants of La Rouchelle, France, refuse to abandon the custom of putting trousers on the front legs of their donkeys.

Because the sea is full of diatoms and copepods the energy from the sun's rays falling on the water is made available to man.

Perhaps for most people, however, that statement needs amplification or explanation before it will be fully understood. The average man probably doesn't know a great deal about diatoms and copepods, though the words may be commonplace terms to the scientist. An extract from a recent paper by Dr. J. L. Hart, a member of the staff of the Pacific Fisheries Biological Station conducted at Nanaimo, B.C., by the federal authorities, explains the matter concisely and clearly, and is likely to be of interest. Dr. Hart was writing of the British Columbia picheards, which are a part of the raw material of Canada's fish canning industry and are used also in producing large quantities of fish meal and oil. Where, he said, do the picheards find food which can enable them to provide two or three million gallons of oil annually, and he went on to give the answer: "The picheards never the question in these waters."

The picheard has two main items of diet—minute, free-floating plants, called diatoms, and small relatives of the shrimp, called copepods. The copepods in turn feed on diatoms and the energy of the sun's rays is transferred to the copepods. By means of the energy of the sun's rays the microscopic plants make use of the radiant energy of the sun's light to transform the small amounts of carbon dioxide dissolved in the sea water and some of the water itself into stores of goods, and thus they retain the energy of the sun's rays. However, the picheards come along, eat diatoms and copepods, digest them, and rebuild them into its own kind of oil and flesh. In this way the energy of the sunlight falling on the ocean is made available to man.

Of course, this doesn't happen only in the case of picheards alone. Other fish get their food in the same way, eating diatoms and copepods and, in some cases, smaller fish which have eaten these tiny plants and creatures. The situation, as Dr. Hart points out, is entirely analogous to the feeding of sheep or other land animals which by grazing in the field accumulate the energy which has been fixed, chiefly as carbohydrates, by the green pigments of the grass.

Should Improve Quality
Canadian Poultry Would Bring Higher Price On British Market

Canadian dressed poultry are booming on the British market, the shipments for the month of January totaling no less than \$71,000 pounds. Of that amount 684,000 pounds were chickens, 140,000 pounds turkeys, and 47,000 ducklings. A comparison with the corresponding January of 1934, when only 50,800 pounds were exported, clearly demonstrates the decided advance in this industry. Chickens from three to four pounds in weight command a ready sale in the British Isles, and while reports from London indicate that the quality of the Canadian chickens being sent forward is pleasing the British consumer, Canadian experts are aware that the Canadian producers could obtain higher revenue for these chickens by still further improving the quality with little more trouble to themselves.

There is nothing new in this. It will be recalled that only 25.35 per cent. of the chickens imported in Canada in the fiscal year 1933-34 qualified for "A" grade, for the simple reason that they were not sufficiently fattened before being marketed. As the Chief Market Poultry Inspector points out, the matter of fattening birds, and thus increasing the producers' revenue, is entirely in the hands of the producers themselves. By a simple method of crate fattening on a mixture of finely ground home grains, there is no reason whatever why a very high percentage of the poultry marketed should not be made to qualify for grade Special and grade "A."

Will Try Difficult Climb
Impregnable Mountain Peak Is Goal Of Alpine Parties

Mount Washington's rocky, ice-laden southeastward facing peak that has defied the most determined efforts of alpinists experienced in the most difficult climbing offered in Europe and America, will be attacked by two parties during the coming summer.

Definite plans have been made by a Boston climbing club and one Vancouver group to attack the impregnable peak during the coming season. Waddington's reputation as an inaccessible height, guarded by treacherous hanging walls of ice which break into terrific avalanches day and night, snow conditions that are as difficult as any in the world has been broadcast to the climbing world following several unsuccessful expeditions—namely that of a Winnipeg party and those of Mr. Henry S. Hall, Jr., of Boston and Mr. and Mrs. Don Murray of Vancouver.

SPRUCEVILLE NEWS

The regular monthly meeting of the C.F.W.A. will be held at the home of Mrs. O. S. Young on Wednesday afternoon, April 24th. Please note the roll call will be "Sing, Say, or Pay." Also note that it has been arranged to hold an exchange of flower slips, so any one having slips to spare, don't forget to bring them along to the meeting. Mrs. Laura Young will give the Horticulture Bulletin.

Mr. and Mrs. Nelson Hall entertained a number of their friends last Thursday to cards.

The "True Blues" meeting mentioned in last week's news will take place this Saturday afternoon, April 20th, at the home of Mrs. Ed Stout. Members please bring needles and cotton, as it is proposed to finish the Baby's Quilt during the afternoon.

We are pleased to report the marriage of Mr. Josh. Biglands to Miss Sutherland of Waskatenau on Wednesday, April 10th. They spent a few days with their parents, Mr. and Mrs. Joe Biglands. We extend our congratulations.

As the roads are so bad, "The Spruceville Ladies' Husband Hunt" has been postponed for a few weeks. But this surely will take place, so watch for announcements later on. Much sympathy is extended to Mrs. Neil McLellan and little son in the loss of a kind husband and father.

Mr. and Mrs. Harry Proudfoot are now settled in their new home. They gave a party to "The Young Marrieds" on Tuesday evening.

Alberta Amateur Interscholastic BOXING CHAMPIONSHIPS

On Monday, April 22 and Tuesday, April 23, the interscholastic Boxing Championships will be held in the

Crescent Theatre in Red Deer. There will be many interesting bouts in this Championship meet and boxers from Central Alberta Schools from 70 pounds weight right up to heavyweights will battle for the Championships in their respective classes. In all there are thirteen classes. Three Lacombe lads are entered in great sports event, i.e., Wm. Brooks, 118 lbs.; Leslie Oulton, 112 lbs.; and Sonny Frizell, 70 lbs. These three lads have lots of talent and should make a good showing. This boxing event is sponsored by the Red Deer A.A.A. and Red Deer Inspectorate A.A.A. and is worthy of everyone's support. All lovers of real, clean amateur sport should make it a point to attend this event and encourage the boys who are boxing as well as the gentlemen who have made it possible. Seats are on sale now at \$1.00, 75c., 50c. and 25c.

The committee in charge is as follows: Chairman, R. B. Welliver; Secretary, D. J. W. Oke; A. B. Mitchell, F. E. Dods, W. J. McLean and J. LaFrance.

HATS
The new "Continental". A very popular hat. Trimmed with silk cord. All the newest colors. David Hay.

Miss Gwen Halpin and Miss Jennie Hensbury left yesterday for Victoria and other coast cities to spend the Easter holidays.
